

*"Companies establishing operations in Nynäshamn may be eligible for financial support, such as equipment left by Ericsson at their Nynäshamn plant."*

# Equipment ready for use

**Companies establishing operations in Nynäshamn may be eligible for financial support, such as equipment left by Ericsson at their Nynäshamn plant. This includes advanced production technology equipment for electronics manufacturing of circuit boards (semiconductors) etc as well as machinery and work areas for servicing and repairs.**

If the required equipment is not already available on site, Ericsson will, on behalf of businesses considering establishing operations in Nynäshamn, examine whether the needed equipment can be found elsewhere. If that is the case, Ericsson can facilitate delivery to Nynäshamn.

Ericsson can also be of assistance in, for example, preparing market analyses and in providing business advice.

## Examples of equipment that can be handed over are:

- **Mechanical shop** – for instance; milling cutters, turning and welding equipment
- **Machines and equipment for electronic production** – a complete SMT-line for serial production of printed board assemblies including screen printer and reflow solder machine.
- **Final assembly** – 25 complete working stations including four ABB-robots.
- **Equipment for material handling** – container storages, lift-trucks, trolleys, packaging equipment, scales and loading docks with equipment for incoming and outgoing goods.

- **Flexlink lines** – three Flexlink lines, each consisting of 11 working stations and one ABB-robot.
- **Repair and service** – a number of stations for fault finding, repair and other electronic services.
- **Test instruments** – test instruments for a great deal of different testing applications; mostly for the radio signalling area.

*A detailed specification can be obtained.*
